## **DETAILED ACTION**

### ***Double Patenting***

1. Claims 11-14 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 8, 12 of U.S. Patent No. 6,245,489.

Although the conflicting claims are not identical, they are not patentably distinct from each other because 12 of the patent designates a product-by-process claim which includes essentially all of the elements in claims 11-14 of the present application. The elements comprise an integrated circuit having an interconnect structure with a patterned hard mask layer in an organic polymer film, wherein a part of the organic polymer film is fluorinated, and the fluorinated part forms a first hard mask layer. However, claim 12 does not explicitly state that a portion of the hard mask layer is a dielectric layer, as stated in claim 11 of the present application. Nonetheless, it would have been obvious to one skilled in the art at the time the invention was made to retain a part of the fluorinated portion as a dielectric layer, as stated in claim 8 of the patent, since the interconnect circuit of claim 12 of the patent is a product-by-process claim of the patent.

Also, the patterned organic polymer film of the claim 12 of the patent is the same material as the material in claim 12 of the present application, which essentially provides the same the same low-K value. Further as to claim 13 of the present application, the organic polymer film has the fluorinated portion as the hard mask portion being placed on the surface and the interior of the organic polymer thereby being non-fluorinated. With respect to claim 14 of the present application, the claimed materials are the same as those in claim 12 of patent and so are the values of K.
